Communicate Better

SIP *Trunking*

SIP trunking allows your organization to connect its IP-PBX and IP communications systems directly to a SIP service provider, reducing and sometimes eliminating the need for conventional PRI, BRI, ISDN or PSTN gateway connections. SIP trunking supports transport of all media types (voice, video, text) which makes it ideal for enterprises wishing to implement a unified communications solution.

It's like being the conductor of an orchestra. As the conductor, you tell the cellos to speed up the tempo or the violins to play quarter with the flick of your wrist. With SD-WAN, you have that same seamless control. The software is integrated on top of your existing WAN so you can quickly and easily command your global network remotely.

SD-WAN

Carrier *Options*

Allow us to be your one-stop shop for any of your carrier or telco needs. We will take a deep dive discovery using advanced tools and knowledge of the industry to help you maximize savings and efficiency. Our vendor-agnostic approach will provide you with a neutral selection of alternative vendors and services.

If you're thinking about moving your phone system to the cloud, let us help you choose the solution that's right for you. We have a plethora of options and will run a proof of concept that allows you to try out your new system before you buy it!

UCaaS

More!

As California's preeminent communications technology integrator, Global CTI works hard to seek out best-in-class solutions that will enhance, secure and transform your operations. We specialize in Voice Technologies, Internet and Wide Area Networking, Data Managed Services as well as a variety of Cloud Services (contact center, meetings/conferencing, cloud storage, emergency notification, and more).
